DETAILED ACTION

Claim Objections

- 1. Claim 8 is objected to because of the following informalities:
 - in claim 8, line 3, "event" should be inserted after "network."

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 6, logically, it is unclear how can steps b) and c) which depend from step a) as recited in claim 1 (i.e., network event in step b) refers to the network event in step a)) can be performed prior to step a) as claimed. Changing the order of the steps therefore renders the claim vague and indefinite.

If the applicant intends to claim the situation in which the identities of affected circuits are pre-calculated (see paragraph 0057 of the specification), it is suggested that claim 1 and 6 be rewritten as follows:

- Claim 1: A method..., said method comprising the steps of:
 - a) identifying a plurality of circuit to be affected by a network event;

Application/Control Number:

10/748,782 Art Unit: 2616 Page 3

b) grouping affected circuits in accordance with one or more end-switches to which a plurality of signaling messages have to be sent; and

- c) bundling said plurality of signaling messages.
- Claim 6: The method of claim 1, after step b) and before step c), further comprising the step of:
 - b.1) receiving notification of said network event; and

wherein results of performing said steps a) and b) are stored for a plurality of network events.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-5 and 7-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Doshi (US 2004/0008619 A1).

Regarding claim 1, as shown in Fig. 2, Doshi teaches a method of reducing signaling load in a communication network (network 100 in Fig. 1) having a plurality of switches (A-D, paragraph 004), said method comprising the steps of:

Application/Control Number:

10/748,782

Art Unit: 2616

Page 4

a) Receiving notification of a network event (step 202, node A receives connection requests, which are tear-down requests for connections in node B associated with the path A-B-C, constituting receiving notification of a network event, paragraph 0027).

- b) Identifying a plurality of circuits affected by said network event (node A must identifies the connections to be torn down related to node B as stated in the received requests, paragraphs 0027-0028).
- c) Grouping affected circuits in accordance with one end-switch (node B) to which a plurality of signaling messages have to be sent (in node A must group the connections on link 1 connecting node A to node B to which the connections requests/tear-down requests have to be sent, paragraphs 0027-0028 and Fig. 1).
- d) Bundling said plurality of signaling messages (in step 204, node A bundles the connections requests/tear-down requests to be sent to node B into a single message, paragraph 0028).

Regarding claim 2, Doshi also teaches e) forwarding said bundled signaling messages to one of said plurality of switches (in step 206, the bundled connections requests/tear-down requests in a single message are forwarded to node B, paragraph 0028).

Regarding claim 3, Doshi also teaches that wherein said forwarding step e) forwards said bundled signaling messages in at least one signaling packet (paragraph 0028).

Art Unit: 2616

Regarding claim 4, Doshi also teaches that wherein said forwarding step e) forwards said bundled signaling messages for circuits with a common end switch (node B, Fig. 1). See paragraph 0028.

Regarding claim 5, Doshi teaches that wherein said signaling messages are release message (tear-down requests, paragraph 0027).

Regarding claim 7, Doshi also teaches that wherein said forwarding step e) forwards said bundled signaling messages for circuits with a common end switch (node B) along a common path (link 1, Fig. 1), see paragraphs 0027-0028.

Claims 8, 9, and 10 are apparatus claims corresponding to method claims 1, 2, and 4, respectively, and are therefore rejected under the same reason set forth in the rejection of claims 1, 2, and 4, respectively with an addition of controller (inherent processor at node A for controlling and performing the method steps set forth in claims 1, 2, and 4, respectively).

Claim 11 is a computer-readable medium corresponding to method claim 1 and is therefore rejected under the same reason set forth in the rejection of claim 1 (see also paragraph 0055).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Nittaya Juntima whose telephone number is 571-272-3120. The

examiner can normally be reached on Monday through Friday, 8:00 A.M - 5:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Huy Vu can be reached on 571-272-3155. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
